# Why choose Kitchen Board from Fibo?

- Easy and quick installation
- Easy to keep clean
- Splash-proof and withstands temperature fluctuations
- Secure solution
- Affordable

Remodelling your kitchen doesn't have to be expensive and labour intensive.

Kitchen Board will give your kitchen an overall impression that is entirely new. You get an easy to maintain and durable result without breaking the bank or spending all your free time on renovations.

We've put together our kitchen renewal collections to give you an idea of the varied options we offer.

## A NEW KITCHEN IN ONE AFTERNOON WITH KITCHEN BOARD

Renew your kitchen in a few hours with panels specially adapted to the space between countertop and overhead cabinets.

Kitchen Board is a secure and durable solution that is extremely easy to install. Easy to care for and maintenance-free panels that can withstand water splashes and temperature fluctuations. A Norwegian quality product with a wide range of decors.

The panels can be mounted directly onto joists or on existing screw-fixed walls. Follow the simple installation instructions and you are assured a tasteful result that you will enjoy for many years to come. The panels are easy to wipe down and simple to keep clean.

Kitchen Board comes in packs containing 2 pieces. Each board measures 23,62 x 22,83 Inches.

All Kitchen Board  
decors are also  
available in full  
height, 94,48 Inches

Kitchen Board comes in packs containing 2 pieces. Each board measures 23,62 x 22,83 Inches. All decors are available in 94,48 Inch height. Installation instructions are provided with the packages.

Note: Because of technical printing reasons, the colours in the decor chart may differ from the actual product.  
KM = Joint width 0,07 inch. K = Joint width 0,13 inch.

4091 SL White Slate KM99  
Arbeitsplatte 855 BT Oppdal

Fire classification for Fibo Kitchen Board: D-s1.d0 – (Equivalent In2) - = Combustible material.

Classification standard: EN 13 501-1.

The requirement from Nemco for stoves in Norway is that they do not produce more heat than 80° C against combustible materials/back wall. If more heat is produced, a fire protective panel must be used on the wall.

**We do not recommend using aluminium decors behind a stove, as these are more susceptible at high temperatures.**

## ACCESSORIES:

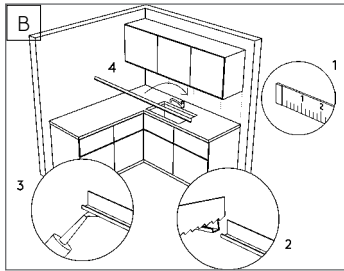

NB! Because of technical printing reasons, the colours in the decor chart may differ from the actual product.

MOUNTING SCREWS	BASE STRIP	INTERNAL CORNER STRIP	L-PROFILE
			
40pcs. + 1bit 0,12 x 0,79 inches	supplied in lengths of 94,48 inches	supplied in lengths of 22,83 inches and 94,48 inches	supplied in lengths of 22,83 inches and 94,48 inches.

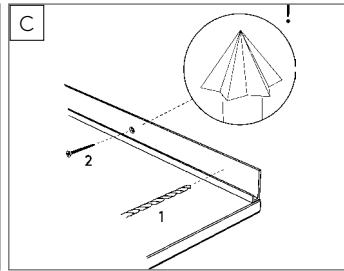

# INSTALLATION OF KITCHEN BOARD WITH BASE STRIP

A

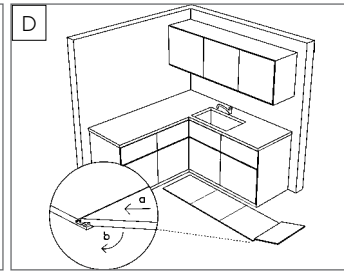

Measure the area and perform alignment/centering of the panels, also alignment relative to the top cabinet if necessary. If mounting is done onto a brick wall, it must be pre-drilled and plugged. Joists should be located and used. It is recommended to use gloves during installation, as there may be sharp edges.

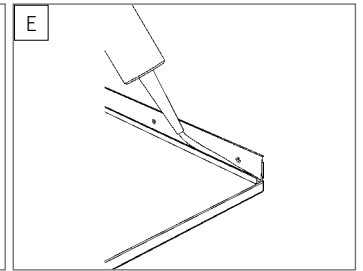

Adjust the base strip to the desired length. Spread joint sealant along the underside of the strip

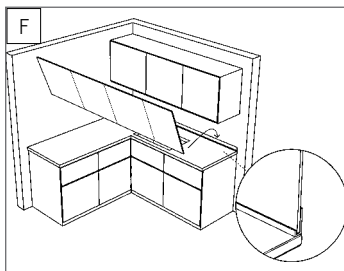

Make a recess in the strip for the screw head so that the panel slides smoothly into the strip. Screw the base strip tightly to the wall.

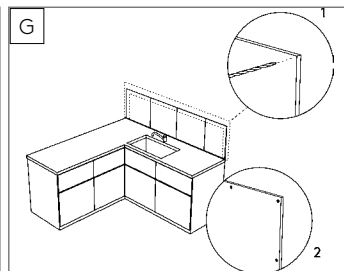

Click the adjusted panels together before affixing to the wall.

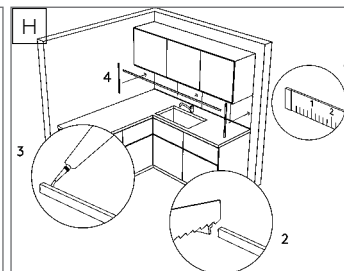

Spread joint sealant at the bottom of the strip.

Raise the joined panels up and set them in the base strip. Wipe away any excess joint sealant.

Screw the panels tightly at top and sides. To avoid damaging the outer surface, it is recommended that you pre-drill the panels.

Top strips and side strips are enclosed and adjusted, sealant is applied and then they are mounted. Spread sealant along the base strip

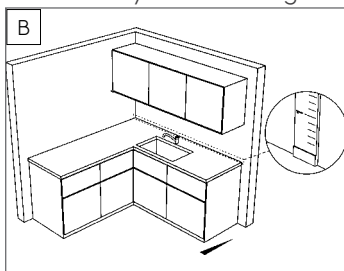

Done!

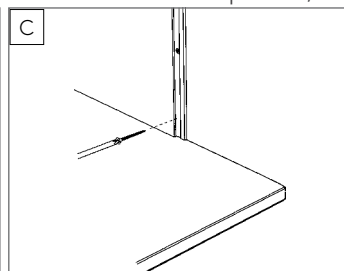

# INSTALLATION WITHOUT BASE STRIP

A

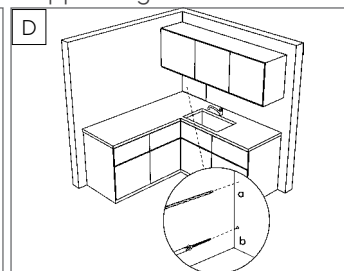

Measure the area and perform alignment/centering of the panels, also alignment relative to overhead cabinet(s) if necessary. If mounting is done on tiles or thin panels, the supporting framework must be localized.

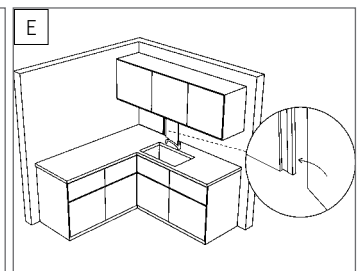

There must be a distance of 0,07-0,11 inches from the countertop up to the bottom of the panel edge.

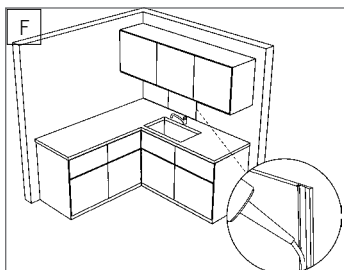

The panels are fastened with screws in the marked track.

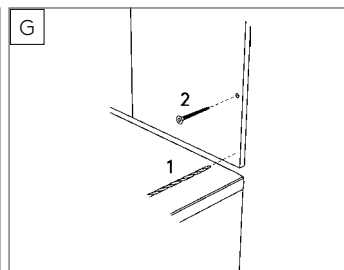

Before installation, holes must be pre-drilled in the laminate to avoid damaging the panel. Screw securely to the edge.

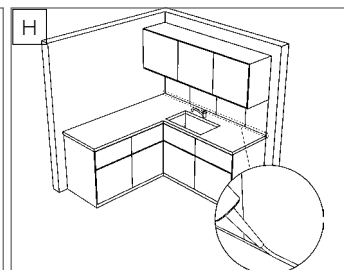

Click the panels into place.

It is recommended to use sealant between panels behind a sink. To be applied before clicking them together.

After pre-drilling and recessing, the last panel is screwed in place. The screw should be covered by the side strip.

Finally, the gap between the countertop and the panels should be sealed. Excess sealant should be cleaned with Fibo Clean and a joint sealant tool.

Remember the correct accessories.

## INSPIRED?

We hope you've gained some idea of the options Kitchen Boards and Countertops from Fibo can give you. Just let your imagination run wild!
